

DREW SEN

North Vancouver, BC, Canada

drew.sen.8288@gmail.com ◇ linkedin.com/in/seniorsoftwaredevdrew ◇ github.com/drewsen88

SKILLS

Programming	Rust, JavaScript, TypeScript, C++, Python, Java, C#, Go, Swift, Objective-C
Tools/Frameworks	Combine, Tokio, Actix, CoreData, React, Fastlane, Bitrise, Jenkins, Git
Databases	SQLite, PostgreSQL, MySQL, MongoDB, CouchDB, NoSQL
Architecture	MVC, MVVM, VIPER, Redux, Reactive, Delegate, Coordinator

EXPERIENCE

Senior Software Engineer Bally's Interactive	Dec 2019 - Present <i>Vancouver, BC - Remote</i>
--	---

- Architected high-throughput microservices in Rust (Actix-Web + Tokio) processing 50k req/s with p95 $\leq$ 40ms.
- Led migration of core payment and cryptography logic to Rust shared via FFI, eliminating data-race classes across iOS and backend.
- Designed modular Cargo workspaces and feature-flag strategy enabling code reuse across 6 product teams.
- Implemented property-based tests with proptest and performance benchmarks with criterion, achieving 3 $\times$ speedups.
- Led talks and workshops on ownership, lifetimes, and async Rust for 10-12 engineers, drove clippy/audit adoption pipeline-wide.

Software Developer PayByPhone	Nov 2016 - Dec 2019 <i>Vancouver, BC</i>
---	---

- Rewrote legacy payment validation service from Node.js to Rust, reducing response time by 80% and halving AWS costs.
- Added async background receipt upload pipeline using Tokio and reqwest, replacing PromiseKit implementation.
- Integrated Serde + Diesel ORM for PostgreSQL with domain-driven modules, improving type safety and maintainability.
- Set up GitHub Actions to lint (clippy), audit (cargo-audit), and deploy Docker images for every merge to main.
- Raised test coverage to 92% via cargo-nextest and mockall, preventing critical regressions in production.

Software Engineer CounterPath	Jun 2012 - Aug 2016 <i>Vancouver, BC</i>
---	---

- Built VoIP & chat features with iOS SDK, Objective-C, and UIKit across Mac and iOS clients.
- Integrated SIP & XMPP protocols for calls, messaging, file transfer, and group chat.
- Developed debugging instrumentation and crash-reporting pipelines for production stability.
- Prototyped an experimental Rust SIP stack to evaluate latency improvements over the C-based implementation.

EDUCATION

Master of Science, Computer Science, University of British Columbia

Bachelor of Science, Mathematics & Computer Science (Co-op), University of British Columbia
